Classic brazing rods Cat. No. GE168B

Reference: GE168B

Price: 49,11 € Excl. Tax 58,93 € Incl. Tax

Description

Classic brazing rods with 6.8% phosphorus!

Brazing is traditionally done with copper- and phosphorus-based rods, available with or without silver. The brazing temperature should be between 600 and 850°C.

The more silver the rod contains, the better the wetting properties and the easier it is to apply the material.

Among the specific advantages of this reference GE168B is its ideal design for assembly brazing of standard gaps of between 0.05 and 0.1 mm.

Our Reference GE168B is sold in one kilo packs. Ø 2 mm - L 500 mm

This reference GE168B offers standard fluidity and will find its place among plumbing professionals.

Please note that this product is available for sale online and can be delivered within 72 hours of receipt of payment.
