Price: 70,61 € Excl. Tax 84,73 € Incl. Tax

Description

Guilbert Express Innovation for Roofing Professionals – Plate and Soldering Paste Set for Tinned Stainless Steel Cat. No. 9652

Guilbert Express presents a new solution designed for roofing professionals: a complete plate and soldering paste set that makes working on tinned stainless steel faster, cleaner and more efficient. Trusted for their performance, reliability and smart design, Guilbert Express products continue to set the standard for professional tools.

During a dedicated technical session, a stainless steel specialist tested the full range of Guilbert Express accessories. The results were conclusive: outstanding efficiency, easy handling and excellent soldering performance on tinned stainless steel. Special praise went to Soldering Paste Cat. No. 852, which proved essential for cleaning and tinning copper roofing iron tips during stainless steel work.

Based on this field experience, Guilbert Express developed a new plate for roofing irons, specially engineered for stainless steel applications. The plate includes a holder for the soldering paste pot, a dedicated brush compartment, a reservoir for Décap'Inox Flux Cat. No. 857 (ideal for Uginox Patina and Uginox Top), a practical anti-drip tab and four non-slip feet to ensure maximum stability, even when working at height. A flux brush is included to make application quick and precise.

Launched under Reference 9652, this new set has already been adopted by professional testers, who described it as one of the key Guilbert Express innovations of 2025. They praised its ergonomic design, practicality and efficiency on roofing sites.

Reference 9652 is available for online purchase and can be delivered within 72 hours after payment confirmation.
