Silver brazing rods Cat. No. GE205C

Reference: GE202C

Price: 146,54 € Excl. Tax 175,85 € Incl. Tax

Description

Brazing rods with 5% silver content!

Brazing is traditionally carried out with copper-phosphorus-based rods, which are available with or without silver. The brazing temperature should be between 600 and 850°C.

The more silver the rod contains, the better the wetting properties and the easier the application of the material.

Among the special advantages of this reference GE205C is its high efficiency in the difficult soldering of copper tubes in installations exposed to vibrations.

Our solder reference GE205C is sold in 0.5 kg packs. Ø 2 mm - L 500 mm.

This reference GE205C offers very high fluidity and will find its place among professionals involved in air conditioning, plumbing and ventilation, refrigeration, electricity and, more generally, among all those involved in fluid transport circuits.

Please note that this product is available for sale online and can be delivered within 72 hours of receipt of payment.
