Silver brazing rods Cat. No. GE205C

Reference: GE205C

Price: 308,92 € Excl. Tax 370,70 € Incl. Tax

Description

Brazing rods with 5% silver!

Brazing is traditionally done with copper- and phosphorus-based rods, which are available with or without silver. The brazing temperature should be between 600 and 850°C.

The more silver the rod contains, the better the wetting properties and the easier it is to apply the material.

Among the specific advantages of this reference GE205C are its high efficiency for difficult brazing of copper tubes in installations subject to vibration.

Our Ref. GE205C is sold in 0.5 kg packs. Ø 2 mm - L 500 mm.

This reference GE205C offers very high fluidity and will find its place among professionals in air conditioning, plumbing and ventilation, refrigeration, electricity and, more generally, among all those involved in fluid transport circuits.

Note that this product is available for sale online and can be delivered within 72 hours of receipt of payment.
